NATIONAL LISTING OF VALIDATED BRUCELLOSIS-FREE HERDS

Swine herds are Validated or Revalidated Brucellosis-Free every month of the year. The herds listed are those that have been reported from the various States as of March 30, 1965. Qualified swine herd owners receive a certificate and a metal sign and both will indicate when the Validated Brucellosis-Free Herd eligibility period ends.

Herd Validation Plan

A swine herd that completes two consecutive negative brucellosis blood tests of all breeding animals, six months of age or over, is designated as a Validated Brucellosis-Free Herd. The tests must be 30 to 90 days apart. Validation is effective for a 12-month period of time and applies to the offspring of all breeding animals tested, including Specific Pathogen-Free (SPF) pigs from such herds. Herds may be revalidated for an additional 12-month period upon completion of an annual negative herd test.

For information concerning swine brucellosis eradication procedures and the Validated Brucellosis-Free Herd program contact your county agent, vocational agricultural teacher, veterinarian, or your State-Federal Animal Disease Eradication representatives.

Area Validation Plan

Areas may qualify as Validated Brucellosis-Free for a period of 3 years provided all breeding herds in the eradication area qualify under one of the following: (1) Negative herd test, in which all breeding swine 6 months of age or older are tested within the 18-month period of time prior to the date Validation is requested for the area. (Owners desiring a Validated Brucellosis-Free Herd must have a second negative herd test 30 to 90 days after the first); (2) Establish negative herd status under the Market Swine Testing Program as follows: Each year for not less than 3 years, 10 percent of the breeding swine or a minimum of one animal, whichever is the greater, shall be blood tested.

Validated Brucellosis-Free Herds in Interstate Movement

At the present time, 48 States will accept breeding swine from Validated Brucellosis-Free Herds in interstate movement without further blood tests. This will eliminate the expense of additional tests formerly required when breeding stock was transported across State lines.

Most States require that breeding swine entering the State be negative to the brucellosis test within 30 days prior to date of entry or originate in a Validated Brucellosis-Free Herd. Only Alaska, Colorado and Puerto Rico require that breeding swine from a Validated Brucellosis-Free Herd be retested within 30 days prior to entry. Swine producers shipping swine interstate should contact officials of the State of destination for other entry requirements.

The various breeds are identified in the National Listing by code letters as follows:

B = Berkshire	M = Mixed Breeds
Bl = Black	Mi = Minnesota
C = Chester White	Ma = Montana
D = Duroc	O = O. I. C.
Gr = Grade	P = Poland
H = Hampshire	Pa = Palouse
He = Hereford	S = Spotted (Poland China)
Hy = Hybrid	T = Tamworth
In = Inbred	W = Wessex
L = Landrace	X = Crossbred
Lb = Large Black	Y = Yorkshire
